lecture

And you?

Name, experience and interest in 3D modelling

Course contents

- How is the built environment modelled in 3D?
 - Fundamentals / concepts
 - Data models and data structures
 - Guest lecture: reconstructing a city in LoD2
 - Applications

New-ish course

- Continuous improvements
 - 2020: Entirely new contents
 - 2022: 3D book
 - 2024: More info: Minkowski sum, new lesson
- Feedback is appreciated!

Prerequisites

- GEO1000 or knowledge of scripting/programming (in any language)
- GEO1002 or basic knowledge of (2D) GIS
- Optional: GEO1015 (Q2) covers complementary topics (2.5D vs 3D)

Blended learning

In your own time:

1. Watch videos
2. Read materials
3. Most important: work on assignments

Contact hours?

- Per week: 2x2h during Monday & Wednesday labs (13:45)
- At the beginning: short lectures, introduction to course/assignments, discussions and demos of course topics, feedback on assignments/exams, etc.
- Then: answer questions, discuss common issues, help with assignments, general programming questions, etc.
- At other times, you can still ask questions on Discord. We might just take longer to answer.

Extra help sessions

Dimitris Mantas

student
assistant

Help with C++ setup and
assignments

Thursdays 16:00 - 17:30

Geolab

How to make the most of it

1. Keep up with the course schedule
2. Study (or at least skim) lessons in advance
3. If you have any doubts, ask questions
4. Make sure you can answer questions (at the end of book chapters)
5. Optional: read one or two external sources (in notes in each chapter)
6. Spend more time on assignments than on lessons

Lessons

- 1.1: Intro [K]
- 1.2: B-rep [K]
- 2.1: 3D DT / Voronoi [H]
- 2.2: Voxels [K]
- 3.1: ISO 19107 [H]
- 3.2: 3D city models [H]
- 4.1: MAT [K]
- 4.2: LoD2 reconstruction [R]
- 5.1: G-maps / c-maps [K]
- 5.2: Curves [K]
- 6.1: CSG [K]
- 6.2: BIM [K]
- 7.1: TBD [K]
- 7.2: Applications [K]

Assignments

- Programming tasks using C++ and open source libraries
- 10% hw1, 20% hw2 and hw3
- 0: C++ preparation (no deadline / not marked)
- 1: Triangulating polyhedron faces (Mar 1) -> available from Wednesday
- 2: Generalising a 3D city model (Mar 22) -> available in week 3
- 3: BIM processing (Apr 12) -> available in week 6

Two exams (in person)

- Mid-term
 - Lessons 1.1 - 4.1
 - Mar 13
 - 5% of final mark
 - Final
 - All lessons
 - Apr 12 @ 9:00
 - 45% of final mark
- Weighted average of 50% to pass the course

Resits

- One resit for both exams together (50%)
- One resit per assignment (mostly likely redo of assignment with modified tasks)
- June 28 @ 9:00

Course website

- No Brightspace!
- Everything is here: <https://3d.bk.tudelft.nl/courses/geo1004/>
- On Monday: check announcements/timetable

The screenshot shows a web browser window with the URL 3d.bk.tudelft.nl/courses/geo1004/. The browser's address bar and navigation icons are visible at the top. Below the browser window, the website's navigation menu includes "GEO1004", "about", "news", "lessons", "homework", "discord", and "etc". The main heading is "3D modelling of the built environment". A green banner below the heading states: "The course is in A+BE Room T (01.Oost.470)".

recent news

Feb 11 The lessons of the first week are online and **Homework 0** has been

week	monday 13:45	wednesday 13:45	other to dos
3.1 Feb 12 - Feb 16	lesson 1.1 (intro) course and homework 0 intro	lesson 1.2 (brep) homework 1 intro	read about page, do homework 0 (C++ preparation)

Questions?

- In person during contact hours or Discord anytime:

- Don't hesitate to ask! General software/programming questions are fine too
- If possible, use geo1004 channel -> everyone can benefit from answers
- E-mail or Discord DM for personal matters

Introduction to 3D modelling of the built environment

Introduction to 3D modelling of the built environment

3D modelling of the built environment

- creation of 3D representations
- ...of anything, real world or not
- ...for animation, films, video games, industrial design, etc.
- focus on representations and techniques that are useful
- ...for real-world objects and fields
- ...in applications within geomatics and related fields

Why 3D?

dB

60

45

30

W/m^2

600

500

400

300

200

100

0

Other applications

- Visualisation (eg for gaming, tourism, navigation, etc)
- Energy demand estimation (and potential for retrofiting)
- Computational fluid dynamics (eg for wind speeds, air quality, effects on buildings, etc)
- Shadow casting (eg for building permits, visibility analysis, improving energy demand/solar potential calculations, etc)

Homework 0 intro

Lesson 1.1 (intro)

- More of a glossary than a lesson. Read to know some important concepts and revisit it if you have doubts later in the course.
- Concepts behind the 3D modelling of the built environment:
 - Different ways to conceptualise 3D modelling process (abstractions vs. chain)
 - Geometry, topology and semantics: links to branches of mathematics
 - Objects vs. fields
 - Data models and data structures

What to do next?

1. Today:

- Homework 0 (install required software for C++ assignments)
- Go to [geo1004](#) website and study today's lesson (3D book Chapter 1)
- If you have extra time, study Wednesday's lesson (3D book Chapter 2)

2. Wednesday: short lecture on b-rep, intro to homework 1 and help with any questions about this week's lessons or C++ installation
