

GeoBIM benchmark 2019

Options for conversion:  
IFC to CityGML &  
CityGML to IFC

Nebras Salheb

# PRESENTATION OUTLINE

- Task Description
- Results template
- IFC Data
- CityGML Data
- Results (submissions)
- Results (observations)
- Discussion

# WHY CONVERSIONS?

Task description

Results template

IFC Data

CityGML Data

Results (submissions)

Results (observations)

Discussion

- Updating CityGML models with data from BIM.
- Giving context for BIM projects using CityGML models.
- GeoBIM integration.

# TASK DESCRIPTION

Task description

Results template

IFC Data

CityGML Data

Results (submissions)

Results (observations)

Discussion

- The participants applied IFC to CityGML conversion and CityGML to IFC conversion on the provided data.
- The workflow is described including all the steps and settings.
- The results are submitted and the results templates are filled.

# RESULTS TEMPLATE

Task description

Results template

IFC Data

CityGML Data

Results (submissions)

Results (observations)

Discussion

- Section 1 - Participant information
- Section 2 - Tested software/tool
- Section 3 - Computer hardware
- Section 4 - The Task (asking the description of the performed conversion)
- Section 5 - Finalization (further information or comments).

Discussion

# RESULTS - Software

Off shelf software:

- FME
- FME Quick Translator
- FZK Viewer
- ArcGIS Pro (Data Interoperability extension)

not commercial, bespoke piece of software:

- IFC2CityGML

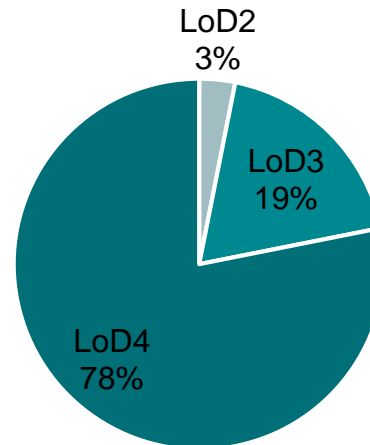

**IFC2CityGML**

# RESULTS - observations

- The resulting CityGML are mainly LoD 4

# RESULTS - observations

- Certain elements like the roofs were lost during the conversion.
- Certain surfaces are inverted.
- Most missing elements seem to be IfcClosedShell objects.
- Addition of spaces in the IFC model would have improved the quality of the output.

# RESULTS - observations

- All of the transformed objects are GenericCityObject with different Geometry Type.
- Slab elements of same floor are converted while adjacent one aren't.
- Roof and Window features are missing after transformation.

# RESULTS - observations

- Visualization of converted CityGML file is different among software.
- FME Data Inspector doesn't render geometries of Wall Surface and Slabs as FZK Viewer.
- Many geometries are not transformed.
- Solids maybe; too complex, not closed or not orientable.
- Some solids maybe missing traits, appearance, measure or attributes.

# RESULTS - observations

- When the IFC file is opened, the software does not support some solids, which are not converted to CityGML.
- LOD2.
- Roof and Window features are missing after transformation.
- Visualization of converted CityGML file is different among software.
- FME Data Inspector doesn't render geometries of Wall Surface and Slabs as FZK Viewer.

# RESULTS - observations

- Many geometries are not transformed.
- Solids maybe too complex... etc..
- Solids maybe missing information ...etc.
- Relations are missing between individual glass screens (windows) and steel frames.
- Could be improved be using Corrected or cleaned georeference. Volumetric or surface property for entities.

## RESULTS - observations

- LOD3/LOD4
- IfcBooleanClippingResult\_1 missing.

CityGML Data

Results (submissions)

Results (observations)

Discussion

# RESULTS - observations

# RESULTS - observations

- When Multiple LoD existed; visualization of IFC was not possible.
- Can be fixed by exporting multiple IFC files with different LoDs based on LoDs of CityGML.
- You have to explicitly add extension .ifc to exported file.

# RESULTS - observations

- Results in LOD 200
- Exports IFC dataset with empty hierarchy. No semantic (attributes) or geometrical information can be visualized in software.
- Only top hierarchy level information (building entity) with guid information is available.
- Similar results on different datasets shows that FME Quick Translator is not compatible for CityGML to IFC conversion.

Results (observations)

Discussion

## RESULTS - preliminary analysis

- Every software creates different output
- Conversion procedures often create LoD4 types, which have bad support on the GIS side, including in our validation software.
- FME seems to be able to process the most IFC types, but looking at results many result in empty or invalid geometries.
- ArcGIS seems to output objects with geometry only.
- FZKViewer seems to produce the most complete results for conversions from CityGML to IFC

# RESULTS - preliminary analysis

- **Ground truth?**  
We will have to figure out what the ideal output should look like since there's no ground truth to compare with.
- **LoD = LoD (LoG) + LoI ?**  
Level of Development [LoD]  
Level of Detail [LoD]  
Level of Geometry [LoG]  
Level of Information [LoI]
- **Not absolute conclusions, but patterns and evidence to reason on.**
